Defense Medical Human Resources System - Internet (DMHRSi)
Position Control Roster (PCR) Information Site
This site was created through the Workforce 2020 initiative and provides guidance and supporting documentation for DMHRSi PCR management. DMHRSi is the Army system of record for the alignment of manpower requirements, personnel, and funding streams. This requires the following actions using DMHRSi:
* Alignment of personnel working within MEDCOM to a Table of Distribution and Allowances (TDA) paragraph and line number
* Documentation of new requirements validated through an approved model, study, or concept plan
* Identification and documentation of 3-star or higher directed missions not yet reflected on the TDA
* Documentation of excess personnel not aligned to a current TDA paragraph and line number
The PCR facilitates force shaping decisions across the MEDCOM. It enables the deliberate management of all MEDCOM personnel and minimizes the liklihood of reductions in force as the Army and Army Medicine restructure to meet current and future mission requirements.
